Education

Delhi Technological University — Delhi, India
B.Tech in Computer Science | CGPA: 7.65 — *2023 – 2027*

School Of Excellence, Khichripur — Delhi, India
CBSE (Class XII) | Percentage: 93.4% — *2023*

School Of Excellence, Khichripur — Delhi, India
CBSE (Class X) | Percentage: 91.6% — *2021*

Technical Skills

Languages: Python, SQL, C++
Generative AI & Agents: Agentic AI Workflows, LLM-powered Applications, LangGraph, LangChain, RAG, Vector DBs (FAISS, ChromaDB), Ollama
Machine Learning & Deep Learning: ML Systems, PyTorch, TensorFlow, Hugging Face, Pandas, NumPy
Frameworks: FastAPI, Streamlit, Supabase (PostgreSQL), Pydantic
CS Fundamentals: Database Management Systems, Object-Oriented Programming, Computer Networks, Operating Systems
Tools: Git, GitHub, Docker, LangSmith, Jupyter Notebook, REST APIs

Projects

AutoData | *LangGraph, Ollama, ChromaDB, LangSmith* — GitHub

- Architected an adversarial multi-agent pipeline inspired by Meta FAIR's "Autodata" research, autonomously generating multi-hop reasoning QA datasets for LLM fine-tuning.
- Implemented a Weak-Strong evaluation loop (Llama 3.1 vs Gemma 4, **20+ pt gap**) and a Corrective RAG (CRAG) Context Evaluator.
- Designed iterative difficulty scaling (up to 5 refinement loops) with end-to-end LangSmith tracing across a Challenger-Solver-Judge architecture.

pip install decmas | *Python, LangChain, Pydantic, Multi-Threading* — PyPI | GitHub

- Architected and published an open-source Python package inspired by Stanford's DeLM research, mitigating traditional "Router-Agent bottlenecks" through a highly scalable decentralized AI architecture.
- Engineered an Asynchronous Task Queue using thread locks to ensure concurrent, race-condition-free task execution across parallel workers.
- Developed a Verified Shared Context that utilizes an LLM-as-a-Verifier to strictly eliminate hallucination chains before global state updates, driving an estimated **50% reduction in redundant API costs**.

PromptArena | *Python, LangGraph, Supabase, Streamlit, Groq* — Live | GitHub

- Developed an 8-node LangGraph workflow with conditional routing and an LLM-as-a-Judge pipeline to execute comparative prompt evaluations across 5 metrics.
- Built 2-layer security guardrails featuring profanity filtering and regex-based PII masking to prevent sensitive data leaks to external APIs.
- Implemented PostgreSQL checkpointing to persist 25 workflow state variables, telemetry data, 3 external tools, and Human-in-the-Loop (HITL) support.

Interactive Systems & Tools

Hyperscale | *Distributed Systems Simulator* — Live

- Engineered an interactive browser-based simulator to visualize distributed consensus mechanics, partition recovery, and node replication across scalable clusters with live telemetry and latency benchmarking.

Additional Information

Competitive Programming: Knight badge on LeetCode (Rating 1900+). Solved **1200+ questions** across LeetCode, CSES, and GeeksforGeeks.
Hackathons: HACKJMI (Feb 2025) – Built a mental health questionnaire using MERN.
Extracurriculars & Leadership: Art & Poetry Society Member. Winner & IGL of an Inter-College Valorant Tournament.
